

Updates are not installed successfully from Windows Update, from Microsoft Update, or by using Automatic Updates after you repair a Windows XP installation

SYMPTOMS

When you try to install updates from the Windows Update Web site, from the Microsoft Update Web site, or by using the Automatic Updates feature, you receive a message that states that the update or the updates were not installed successfully. However, the updates are not displayed in the Update History part of the Web site.

Revision : 1.1

You experience this problem if the following conditions are both true:

- You try to update a computer that is running Windows XP.
- You have repaired the Windows XP installation by using the Windows XP CD.

CAUSE

This problem occurs because of how the Windows XP repair operation replaces Windows system files. When you repair a Windows installation by using a Windows XP CD, the repair operation performs both of the following operations:

- It replaces all the Windows system files with the corresponding files from the CD.

Note This includes the Windows Update files.

- It restores the Windows registry.

The latest version of Windows Update includes a file that was not available in the release version of Windows XP. This file is named Wups2.dll. Therefore, after the repair operation is complete, the following situation exists:

- The Wups2.dll file remains on the computer.
- The registry entries that correspond to this file are missing.

Because the registry files that correspond to the Wups2.dll file are missing, update installations are unsuccessful.

RESOLUTION

To resolve this problem, register the Wups2.dll file in Windows. To do this, follow these steps:

1. Stop the Automatic Updates service. To do this, follow these steps:
 - a. Click **Start**, click **Run**, type **cmd**, and then click **OK**.
 - b. At the command prompt, type the following command, and then press ENTER:

net stop wuauaserv

2. Register the Wups2.dll file. To do this, follow these steps:
 - a. At the command prompt, type the following command, and then press ENTER:

regsvr32 %windir%\system32\wups2.dll

Note For a computer that is running Windows XP Professional x64 Edition, type the following command, and then press ENTER:

regsvr32 %windir%\syswow64\wups2.dll

- b. Click **OK** on each verification message that you receive.
3. Start the Automatic Updates service. To do this, type the following command at the command prompt, and then press ENTER:

net start wuauaserv

4. Exit the command prompt. To do this type **exit**, and then press ENTER.

STATUS

Microsoft has confirmed that this is a problem in the Microsoft products that are listed in the "Applies to" section.

APPLIES TO

- Microsoft Windows XP Professional
- Microsoft Windows XP Professional x64 Edition
- Microsoft Windows XP Home Edition
- Microsoft Windows XP Media Center Edition 2002

- Microsoft Windows XP Media Center Edition 2004
- Microsoft Windows XP Media Center Edition 2005
- Microsoft Windows XP Tablet PC Edition
- Microsoft Windows XP Tablet PC Edition 2005
